## Amendment

## In The Claims:

Please amend claims 1, 24, 25, 36, 40 and 41 as shown in the complete list of claims below.

- 1. (Currently Amended) A plurality of mounts releasably adhered to a single sheet of a backing material, each mount being made of a single material and being a mount for mounting paper to glass, and comprising a body having a first surface carrying an adhesive coating capable of adhering the mount to a sheet of paper to form a mountable arrangement, and a second surface capable of securing such a mountable arrangement directly to glass without adhesive.
- 2. (Original) A plurality of mounts according to claim 1, provided in the form of a roll.
- (Original) A plurality of mounts according to claim 1, provided in the form of a flat sheet.
- (Original) A plurality of mounts according to claim 1, wherein the first and second surfaces of each mount are mutually opposite.
- 5. (Original) A plurality of mounts according to claim 1, wherein the first surface of each mount is capable of adhering the mount only to a part of one surface of the sheet of paper to form the mountable arrangement.
- 6. (Original) A plurality of mounts according to claim 1, wherein each mount is capable of releasably securing the mountable arrangement directly to glass.
- 7. (Original) A plurality of mounts according to claim 1, wherein the first or second surface of each mount is flat.
- 8. (Original) A plurality of mounts according to claim 1, wherein each mount is flexible.

- (Original) A plurality of mounts according to claim 1, wherein each mount is transparent.
- 10. (Original) A plurality of mounts according to claim 1, wherein each mount comprises a plastics material.
- 11. (Original) A plurality of mounts according to claim 10, wherein each mount further comprises a plasticiser.
- 12. (Original) A plurality of mounts according to claim 11, wherein each mount comprises at least 55 parts plasticiser per 100 parts plastics material.
- 13. (Original) A plurality of mounts according to claim 10, wherein the plastics material is polyvinyl chloride.
- 14. (Original) A plurality of mounts according to claim 1, wherein the thickness of each mount is up to 2mm.
- 15. (Original) A plurality of mounts according to claim 14, wherein the second surface area of each mount is in the range 100mm<sup>2</sup> to 900mm<sup>2</sup>.
- 16. (Original) A plurality of mounts according to claim 1, wherein the first or second surface of each mount is square, rectangular, triangular or circular.
- 17. (Original) A plurality of mounts according to claim 1, wherein the second surface of each mount is not capable of adhering the mount to paper.
- 18. (Original) A plurality of mounts according to claim 1, wherein each mount comprises a pigment material.
- 19. (Original) A plurality of mounts according to claim 1, wherein the backing material includes silicone.
- 20. (Withdrawn) A device for dispensing a mount including a plurality of mounts as defined in claim 1.
- 21. (Withdrawn) A method for making a plurality of mounts as defined in claim 1 comprising the steps of:
  - (i) providing the backing material;

- (ii) applying an adhesive coating to a surface of the backing material;
- (iii) adhering releasably the mount material to the backing material; and
- (iv) forming the plurality of mounts from the mount material.
- 22. (Withdrawn) A method according to claim 21, wherein the plurality of mounts is formed in step (iv) by cutting.
- 23. (Withdrawn) A method according to claim 21, wherein the adhesive is applied in step (ii) by a roller or a spray nozzle.
- 24. (Currently Amended) A mount for mounting paper to glass, comprising a body made of a single material and having a first surface carrying an adhesive coating capable of adhering the mount only to a part of one surface of a sheet of paper to form a mountable arrangement and a second surface capable of securing such a mountable arrangement directly to glass without adhesive; where the first and second surfaces are mutually opposite.
- 25. (Currently Amended) A mount for mounting paper to glass, comprising a body made of a single material and having a first surface carrying an adhesive coating capable of releasably adhering the mount to a sheet of paper to form a mountable arrangement and a second surface capable of securing such a mountable arrangement directly to glass without adhesive; where the first and second surfaces are mutually opposite.
- 26. (Original) A mount according to claim 25, wherein the first surface carrying an adhesive coating is capable of adhering the mount only to a part of one surface of a sheet of paper to form a mountable arrangement.
- (Original) A mount according to claim 25, wherein the first or second surface of the mount is flat.
- 28. (Original) A mount according to claim 25, wherein the mount is flexible.
- 29. (Original) A mount according to claim 25, wherein the mount comprises a plastics material.

- 30. (Original) A mount according to claim 29, wherein the mount further comprises a plasticiser.
- 31. (Original) A mount according to claim 25, wherein the thickness of the mount is up to 2mm.
- 32. (Original) A mount according to claim 31, wherein the second surface area of the mount is in the range 100mm<sup>2</sup> to 900mm<sup>2</sup>.
- 33. (Original) A mount according to claim 25, wherein the second surface of the mount is not capable of adhering the mount to paper.
- 34. (Original) A mount according to claim 25, wherein the first surface of the mount is adhered releasably to a backing material.
- 35. (Original) A mount according to claim 25, wherein the entire surface of the mount is adhered to less than half of the area of a surface of a sheet of paper for permitting the sheet of paper to be mounted to glass.
- 36. (Currently Amended) A method for securing a first material to a second material, comprising:
  - releasably adhering a first surface of a mount to the first material with an adhesive coating carried by the first surface, wherein the mount and first material form a mountable arrangement; and
  - securing a second surface of the mount to the second material without adhesive, where the first and second surfaces are mutually opposite and the mount comprises a body made of a single material.
- 37. (Previously Amended) The method according to claim 36, wherein the first material is a paper-based material.
- 38. (Previously Amended) The method according to claim 36, wherein the second material is a glass-based material.
- 39. (Previously Amended) The method according to claim 36, wherein the second material has a smooth surface.

- 40. (Currently Amended) A method for securing a first material to a second material, comprising:
  - adhering a first surface of a mount to a part of one surface of a sheet of paper with an adhesive coating carried by the first surface, wherein the mount and the sheet of paper form a mountable arrangement; and
  - securing a second surface of the mount to glass without adhesive, where the first and second surfaces are mutually opposite and the mount comprises a body made of a single material.
- 41. (Currently Amended) A mount arrangement for mounting paper to glass comprising:
  - a plurality of mounts, each mount comprising a body <u>made of a single</u>

    <u>material and having a first surface carrying an adhesive coating</u>

    capable of adhering the mount to a sheet of paper to form a

    mountable arrangement, and a second surface capable of securing

    such a mountable arrangement directly to glass without adhesive;

    where the first and second surfaces are mutually opposite.
